A. Request an Evaluation License

First, install PaleoScan™ and launch the application to get the machine's Host ID and Host Name required by Eliis to generate a License.

Then, follow the [chapter B](#) to retrieve the information and send them to Eliis at license@eliis.fr

Note: these values can be directly sent to the Eliis team using the generated email (see [chapter B. 1](#)).

Once you receive the license file, please follow the instructions described in the [chapter C](#) to activate your license.

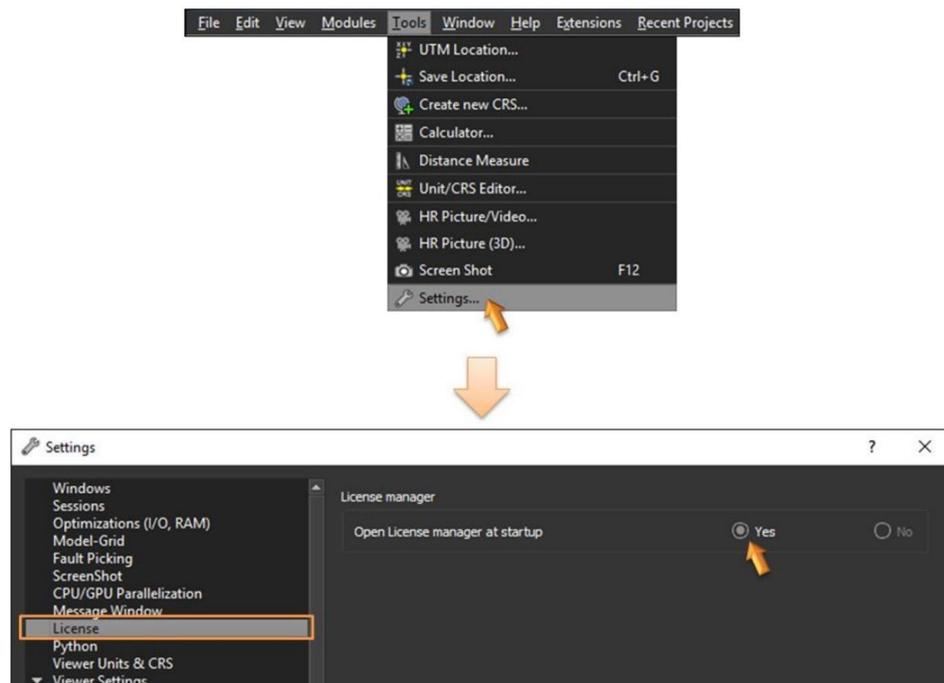

B. Retrieving the Host ID and the Host Name of the local machine

The host ID of the machine as well as the Host Name have to be communicated to Eliis at license@eliis.fr to generate the license file.

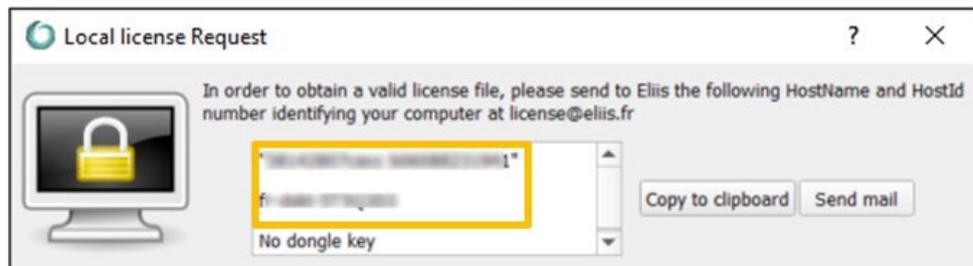

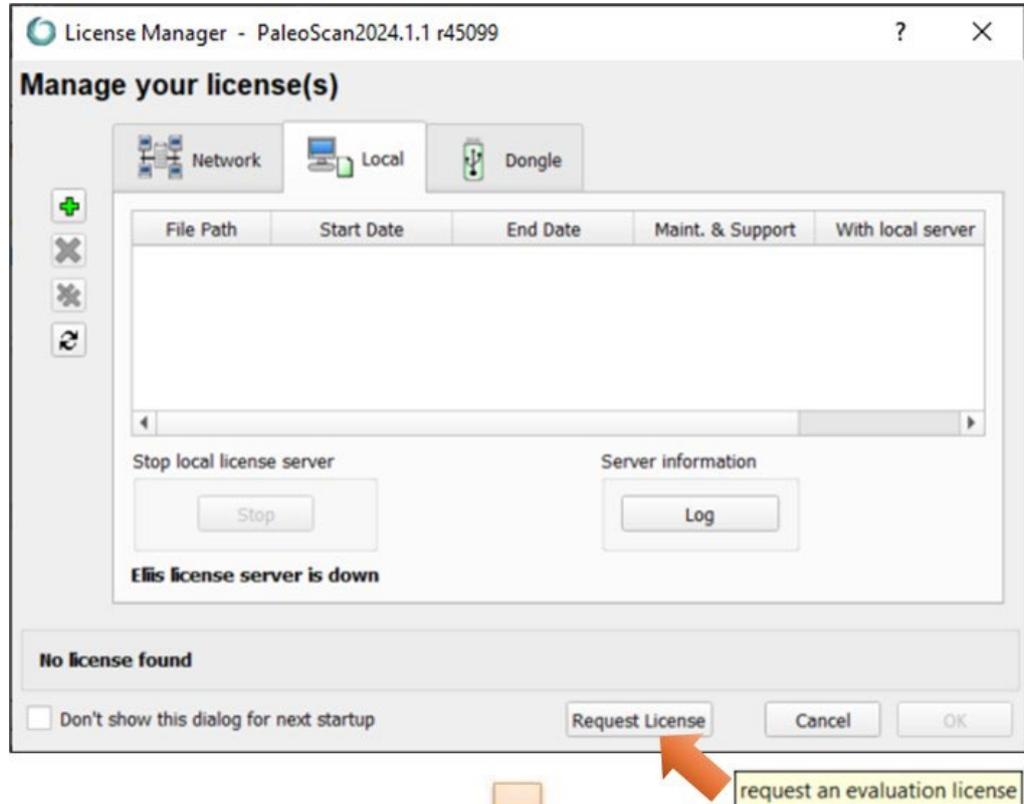

Two solutions are available to get access to these values.

1. From PaleoScan™

- Open PaleoScan™, the License Manager should appear. If the License Manager does not present itself, the user must force its opening from the PaleoScan™ settings:
 - From the PaleoScan™ **Tools** file menu, go to **Settings** and click on the **License** section. Finally, check the option to **open the License Manager at startup**:

- Close PaleoScan™ and restart the software: The License Manager should present itself.
- In the License Manager, click on the Request License button in order to get the machine's local Host ID and Host Name:

2. From Windows®

Both the Host Name and the Host ID can be retrieved using the program **lmhostid.exe** located inside the **licensing** folder in the PaleoScan™ installation folder.

From a **Windows Command Prompt** (press **Windows®+R** and enter **cmd**):

- Go into the PaleoScan™ installation folder. Copy and paste this path in the command window following this template:

cd "C:\Program Files\Eliis\PaleoScan\2024.1.1\licensing"

- In order to get the Host ID, enter: **lmhostid.exe -ether**
- In order to get the Host Name, enter: **lmhostid.exe -hostname**

```

C:\Windows\system32\cmd.exe
Microsoft Windows [Version 10.0.19045.5247]
(c) Microsoft Corporation. All rights reserved.

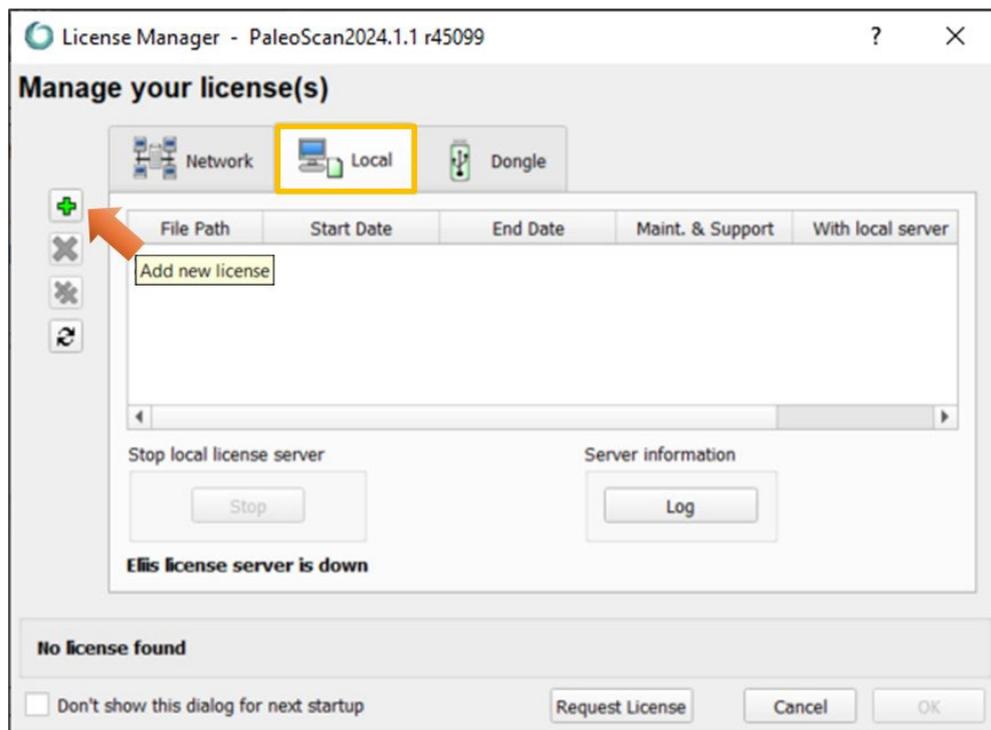

1 C:\Users\naouel.aribi.ELIIS>cd C:\Program Files\Eliis\PaleoScan\2024.1.1\licensing
2 C:\Program Files\Eliis\PaleoScan\2024.1.1\licensing>lmhostid.exe -ether
lmhostid - Copyright (c) 1989-2018 Flexera. All Rights Reserved.
The FlexNet host ID of this machine is "201420071.exe: 000000211011"
Only use ONE from the list of hostids.
3 C:\Program Files\Eliis\PaleoScan\2024.1.1\licensing>lmhostid.exe -hostname
lmhostid - Copyright (c) 1989-2018 Flexera. All Rights Reserved.
The FlexNet host ID of this machine is "HOSTNAME=1-1-1-1"
C:\Program Files\Eliis\PaleoScan\2024.1.1\licensing>
    
```

C. Activation

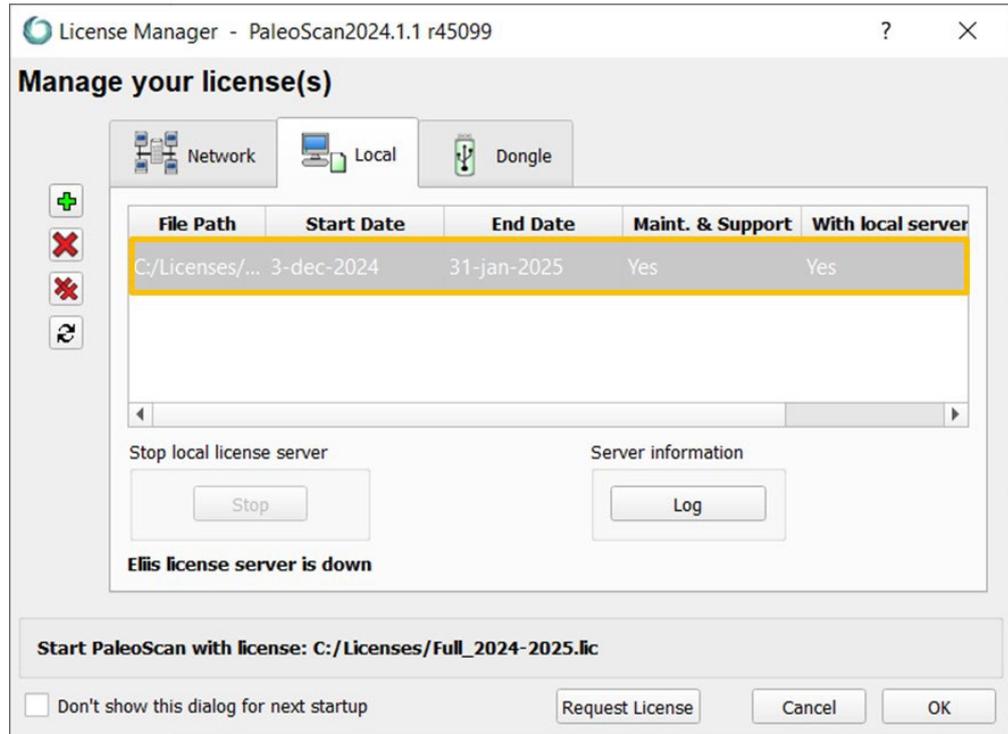

At this stage, it is assumed that a valid license file has been received from the Eliis team.

1. Select the local license from PaleoScan™

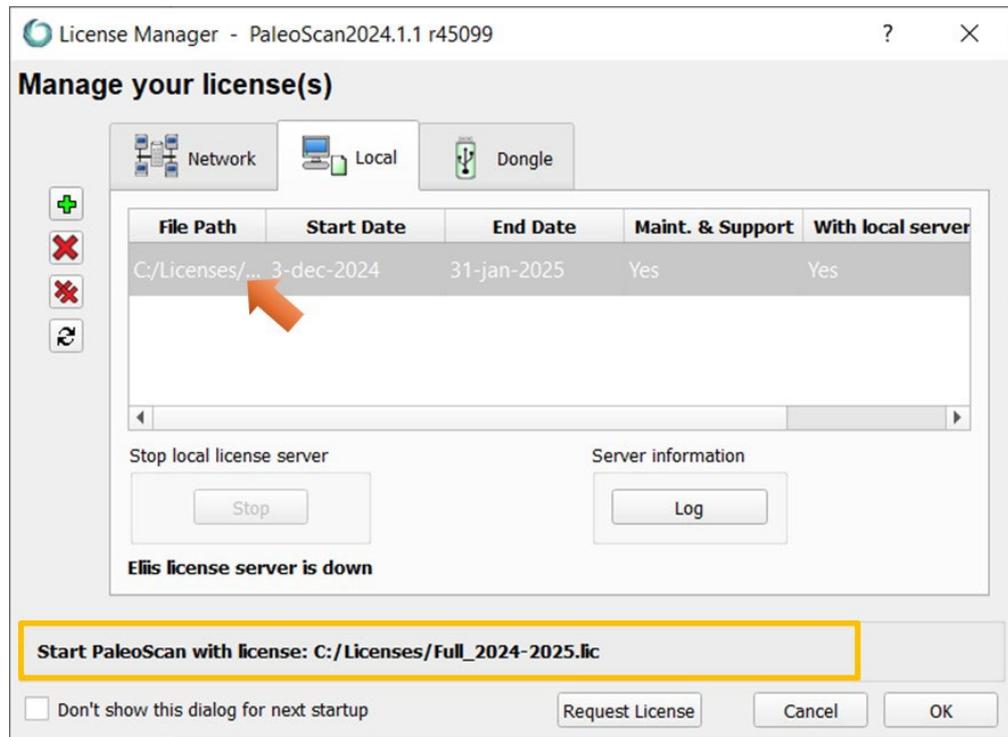

- Select the **Local** tab.
- Select the local license file using the  icon called **Add new license**:

- If the selected license is valid, a new row displaying the license details is inserted inside the license file list:

- Once the license file is displayed in the license list, it must be selected by one click on it:

2. Start PaleoScan™

Depending on the local license type, a local server may have to be run.

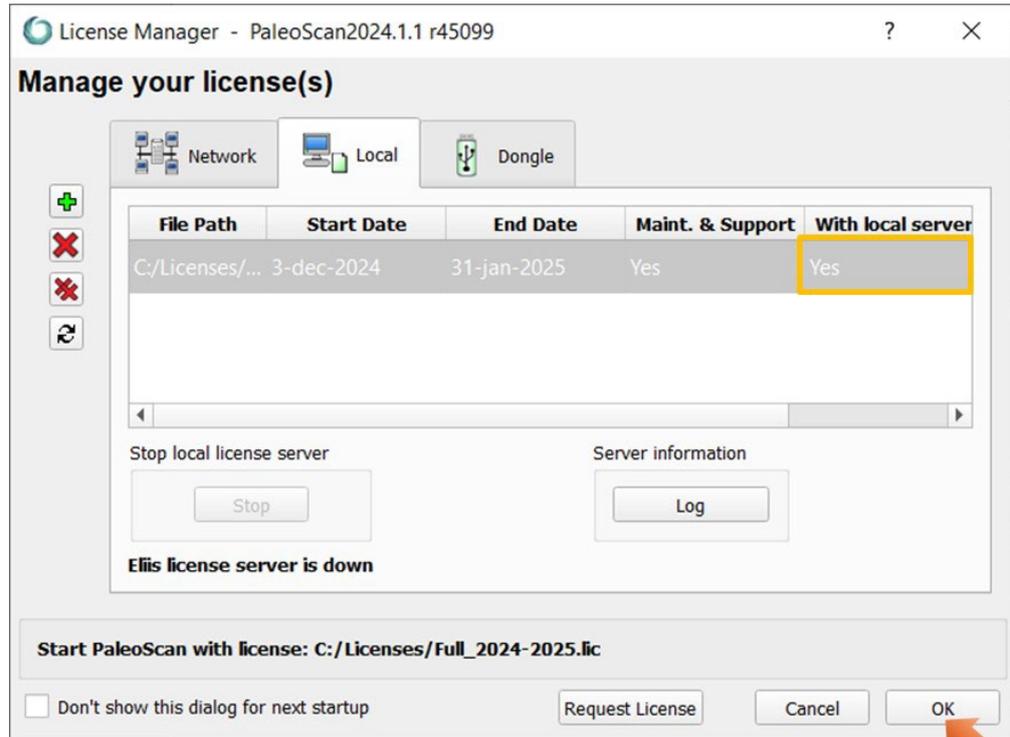

This information is displayed in the column named **with local server** from the license list table.

a) If local server value is set to No

- No local server is required: Click on the **OK** button to start the software using the selected license.

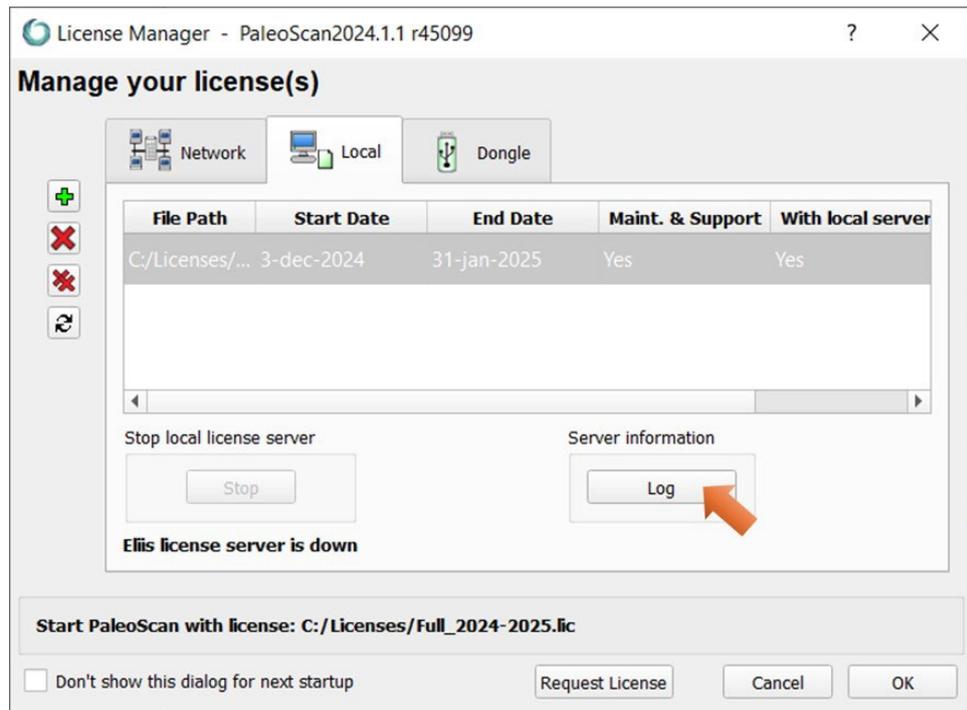

b) If local server value is set to Yes

- A local server is required: If no local server is running (message *No Eliis license server is running on the local machine* is shown), click on the **OK** button:

- The window will close and the software will start. But if it is opened again, the local server state message must have been updated to ***Eliis license server is running***.

Note : If the local server does not start, please read the [D. Common issues chapter](#). The server log file may also help. Click on the **Log** button to open it:

Note: Activation may require administration rights.

D. Common issues

1. The local license server does not start

a) Define a custom port

If there are other software based on Flexera software licensing system running on the machine, there may be some port conflicts. To avoid such issue, edit the license file and specify a custom (unused) port number (from 27000-27009):

```
SERVER alpha 50eeeeeeee 27005
VENDOR eliis
FEATURE [...]
```

b) Another server is running

There may be unexpected **lmgrd.exe** processes or **eliis.exe** running. Close PaleoScan™, kill all **lmgrd.exe** processes, and restart the local license server.
